

Multi-Asset Trading Platform — Practical Aspects of Development and Testing

Danil Baburin
Head of QUIK development

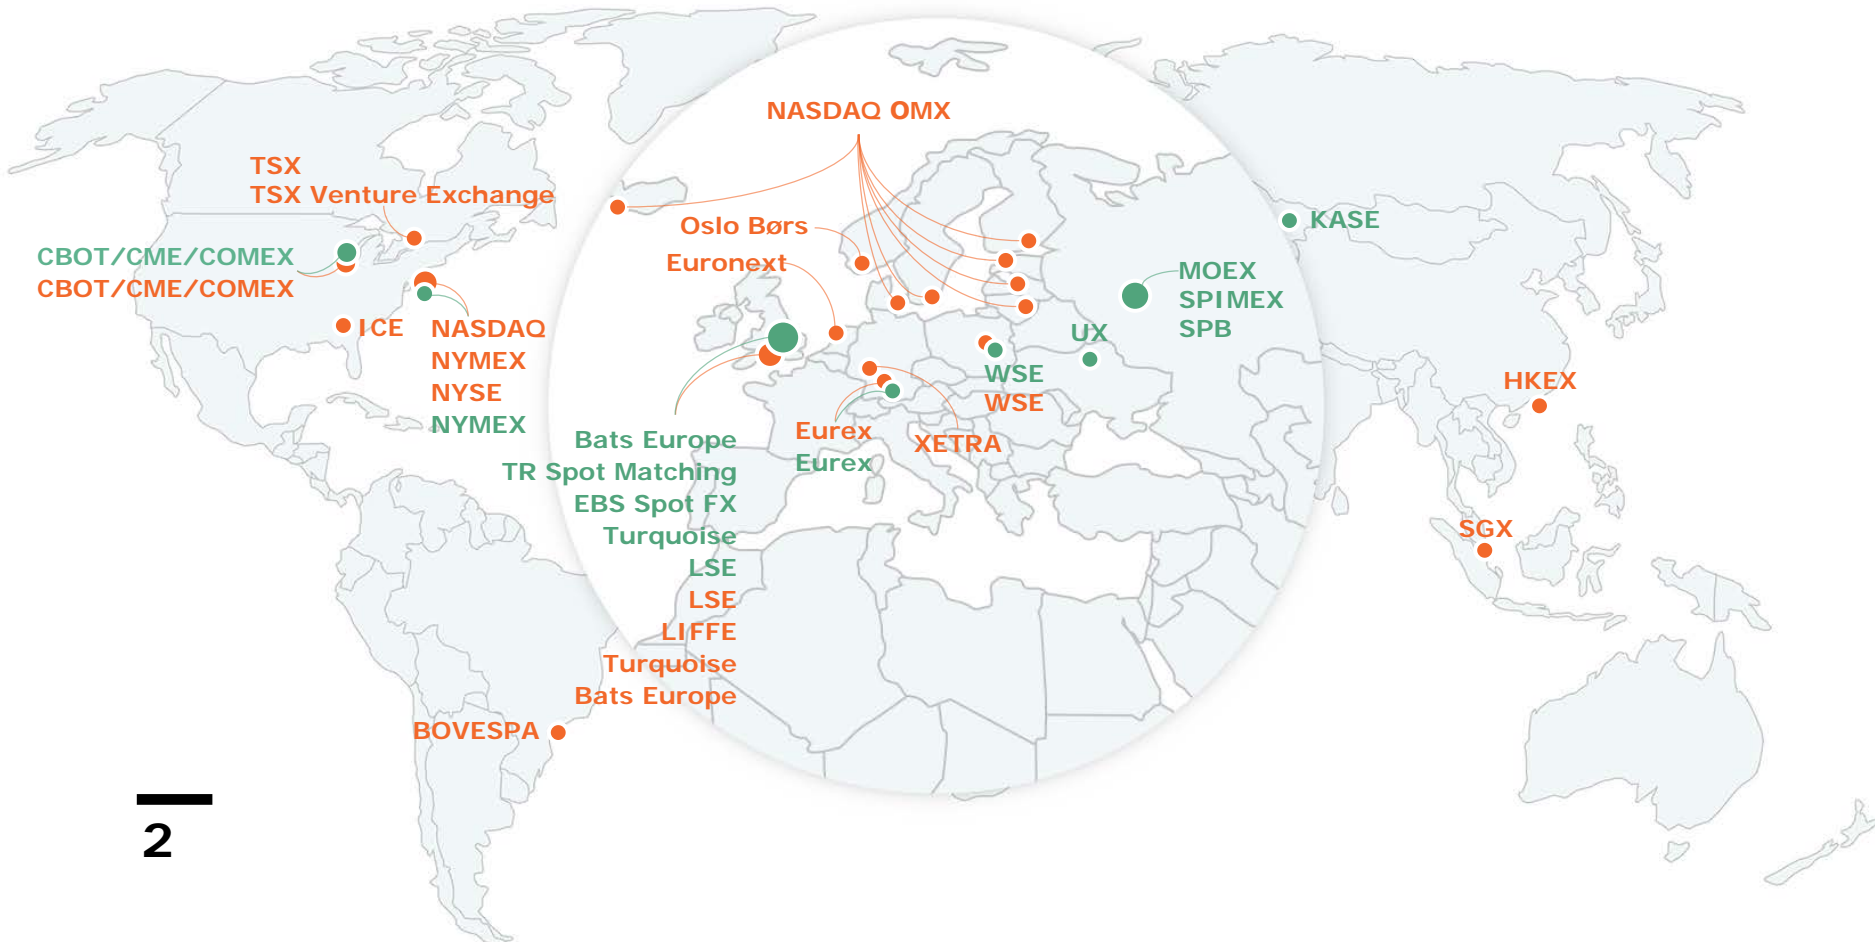

ARQA Technologies

key facts

1. Leading independent financial software provider in Russia and CIS
2. 17 years on the market
3. 250+ client base
4. Over 100 000 end screens using it on daily basis
5. Multi-asset, broker-neutral and market neutral OEMS
6. Risk management solutions
7. Trading access to 30+ major venues worldwide

Global connectivity

- 'Direct' gateways
- Gateways via technological partners

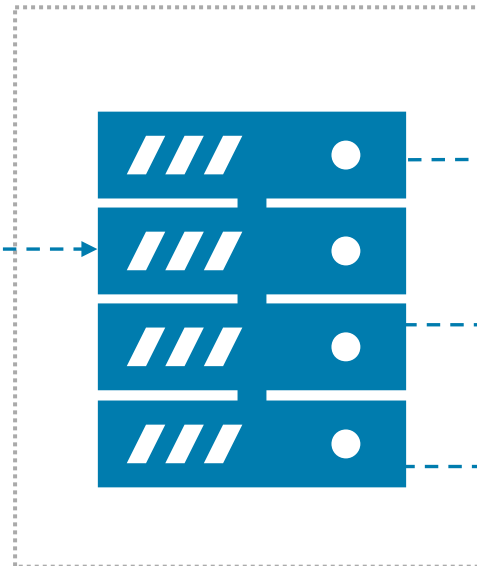

Typical 3-tier architecture

Modular approach

Key facts

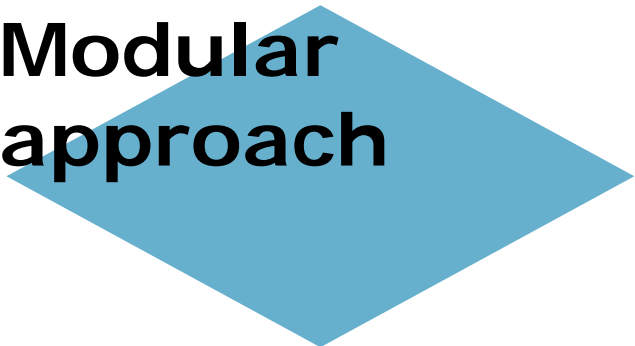

About 170 modules in all (including legacy), 120 modules in the current pricelist

On average, 20 modules in production pipeline

3 to 5 releases every week

30 development, 15 testing, 15 support staff

Modular approach

General rules of interaction

Specialization

Architectural integrity

Distributed ownership

Immediate request segregation

Modular approach

What contributes to successful testing

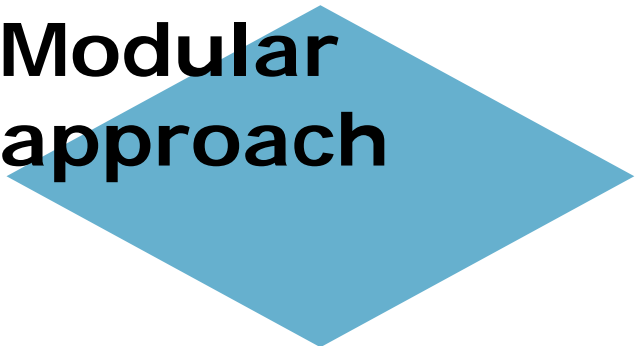

Available test environment
exchange simulators

Repeatable conditions
set of options to straighten data flow

Reference results
comparison with previous version

Automatic regression checks

Modular approach

Exceptions

Separate risk modules for each asset class

VS

Single risk module for portfolio margining

ARQA
